The Guest speaker discussed how one's diet plays a role in climate change. She explains by being a non-vegetarian the people unknowingly become a cause for climate change because of various reasons like

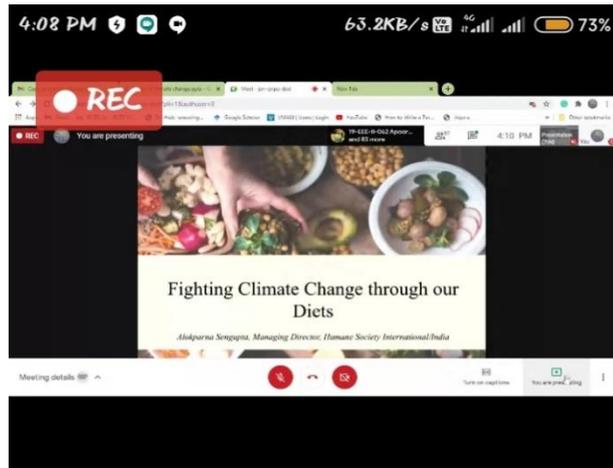

- a) The fodder demand for the animals like pig, cows, etc, are very large and growing each year and so to cope up with this a large extent of forests are cleared.
- b) Also the demand for water is also too high in cultivating these animals.

She also added the point that the chicken we consume is of genetically modified to give more flesh and similarly the hens used to harvest egg are also genetically modified. She clearly explained how the broilers hens are made to grow in a artificial manner. Broilers are just 30-45days old but their grows is so exponential. Also the hens in general last only 40-50 eggs in a year but they are modified to lay nearly 300- 360 eggs in a year. She made a clear point that the covid 19 actually broken out initially at a wet market in Wuhan, Hubei province

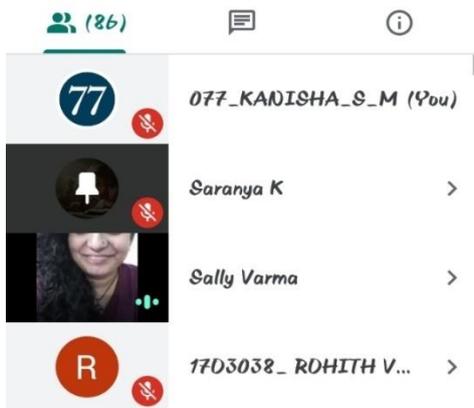

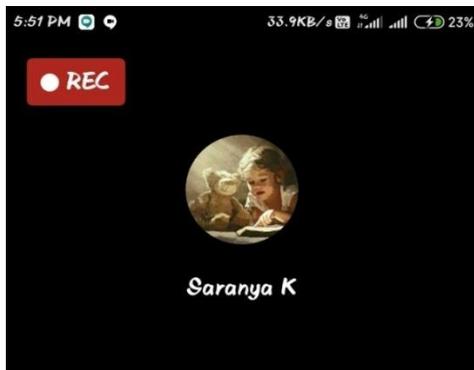

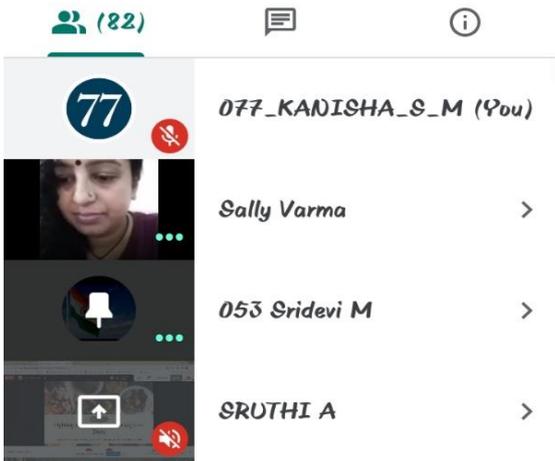

Finally she requested us to reduce the consumption of red meat and so that the harvesting method change to natural ways so the people would not be affected. The session was really informative and useful for the Participants.
