Feedback from Alumni

I am S. Balamuruga from 2016 Batch M.Sc. Data Science. I am glad to provide my feedback about the college and the Data Science course. My overall experience to date has been amazing, and the college has an excellent infrastructure, experienced teaching faculties, and great management. It provided me with a number of opportunities to grow and explore my data science-related skills. The emphasis on data science basic courses like Linear algebra, Probability Statistics, Machine learning, and deep learning along with Computer science fundamentals like Programming, Data Structures and Algorithms, Database Management systems, Computer Architecture, and Computer Networks, always helped me a lot in my career. I have always found a positive and healthy environment and the teachers are highly supportive. Most of my doubts were cleared after the classes get over.

The course is well designed, well presented and the content is up-to-date, covering almost everything a data science aspirant would need to prepare for an entry-level data science role at top product companies. Management also encourages students to participate in hackathons, symposiums, workshops, and technical conferences.

The greatest advantage that the course offers is its 7th-semester Internship opportunity where you get to work with real-life problems in industries and come back to college with an ample amount of understanding of how each concept that you learn in college courses works in the Tech industry.

I am highly thankful for providing me with an opportunity to be a part of this prestigious course. It has added a number of values to my life.

Thank you again.

Hi, I am Harish Gowtham S, from 2017 batch (First Batch), M.Sc.DCS. M. Sc. Decision and Computing Sciences Programme is one of its kind and I'm lucky to be part of the 1st batch passing out. The course provides a perfect blend of Software, Data Science and Business management. The benefit of this blend is that when you work as a Software Developer or a Data Analyst, more than understanding the software requirements or the Data, you will be able to understand the business requirements of that particular project. As a student of this programme, I personally benefited in exploring different opportunities the curriculum offered and the staffs who guided me.

If you are looking for a programme that has scope in multiple fields within the IT industry or someone who hasn't decided the area of interest, then this is a perfect opportunity for you. Also, not to forget the 2 internships you get in this Integrated M. Sc. programme. The 7th semester internship helps you understand how the IT industry works and explore your areas of interest with the freedom to switch between domains during your 10th internship/placement.

The trending topics in the IT industry such as Digital marketing, Financial analysis, Cloud computing are also part of this curriculum. If you are an aspiring Data Scientist, then this is a perfect opportunity for you because this curriculum teaches all the necessary skills along with in depth understanding in each of them. If you are an aspiring Software developer then don't you worry as this curriculum has all the necessary skills for that as well.

I was also the internship coordinator for the 7th semester internship and the placement coordinator during my 5th year. So, I had an opportunity to closely interact with the industry experts and HRs. During this period, I could witness the demand for qualified Data/ Business analysts and how closely our curriculum has been framed to meet that requirement. I also had the opportunity to see how this benefited my fellow classmates in their placements. This is purely due to the projects we do in each semester right from our 1st semester. In each semester, the projects we did had incorporated the concepts covered in that semester including the management papers which acted as a business logic/ requirement for that project.

Therefore, like I mentioned before this programme is a perfect blend of Software, Data Science and Business management that opens up world of opportunities to the young minds. Best Wishes!!
