

## Faculty Mobility Program at Telkom University

### Report

I am KR Shanmugapriya, currently serving as an Assistant Professor in the Department of Artificial Intelligence and Data Science. I had the privilege of participating in the **Faculty Mobility Program at Telkom University**, located in Bandung, Jakarta. This program was a significant initiative aimed at enhancing academic collaboration and providing valuable international exposure to both students and faculty members.

As part of this enriching experience, eight of our students were selected to participate in internships across various projects at Telkom University. These internships offered them hands-on experience, enabling them to apply theoretical concepts to real-world challenges and thereby bridge the gap between academic learning and industry practices.

During the program, I was honored to deliver a guest lecture on "Challenges in Natural Language **Processing (NLP)**". The session was attended by a diverse and enthusiastic audience comprising students and faculty members. Key topics covered included the complexities of language understanding, the current limitations of NLP models, and ongoing research efforts aimed at addressing these challenges. The session sparked engaging discussions and insightful questions, enriching the learning experience for all participants.

The Faculty Mobility Program proved to be a **resounding success**, fostering meaningful cross-cultural academic exchanges and offering a platform for knowledge sharing. It strengthened our institutional ties with Telkom University and laid a strong foundation for future collaborative initiatives.
