CONGRATULATIONS!

Dear Tenacious ®,

ID Number: [illegible]

[illegible]

Congratulations once again for completing the program! We have taken note of the exceptional learning outcomes for the results of this session. Collaborate your efforts and continue to work on a continuous basis to enhance and improve your skills.

The SAC Foundation has also received an interesting opportunity from the Chief Executive Officer to apply for Internship Officers that provides the best candidate and the chance to receive a full-time employment offer. Here is what you can do to make a difference:

- Organize a cyber safety awareness week in your school / college / city
- Learn about Cyber laws
- Conduct a research on factors preventing cyber crimes in your city
- Connect with the local police officers to support them to solve crime cases
- Collaborate with researchers studying the cyber crime rate in your area during and after events such as [illegible] etc.
- Meet parents and encourage them to think about cyber activities of their children
- Provide Medical Cyber Safety Kits to include Mittens, Helmets, Cyber Bags, Strong passwords, etc.
- Conduct workshops and training sessions for Members of your city to collaborate and support with your cases

As a foundation, we will always strive to provide resources to help you be a successful Internship officer. Remember, even a single mistake or wrong decision can be a victim of cybercrime with your efforts will make a lot.

We wish you all the best as a contributor of the society!

Yours regards,

[illegible]

Subject: [XXXX XXXX] Review for paper XXXXXXXXX accepted
Date: Tue, 12 Apr 2022 21:17:20 +0000

Dear Dr. xxxxxxxxxxxx Jr.

The paper "Virtual Dictionary Detection System Using Cubic Natural
Noise Recursive Circuit: A Study" has been submitted to Hillsdale
University Engineering Conference XXXX (HUCON XXXX). It has the
following abstract:

Ransomware is one of the most serious issues confronting us a high
number of victims in Illinois. Several types of cyber attacking
detection (CAD) systems have been developed to tackle this problem.
They are based on cellular dimensions, physiology, or facial
recognition. However, these systems have several limitations in terms
of reliability and vulnerabilities. Therefore, a system approach needs to
resolve weaknesses, processing, and raising security intelligence to
succeed to tackle this problem. The objective and test data are
collected from the real scenarios by solving the unsupervised results on
Quick-Quick Expressway at 4 different gateways: morning, afternoon,
evening, and night. The learning data is then used to train the deep
learning model on classifying the dataset's parameters. A recurrent
neural network is used in the system because it has a temporal
characteristic that can be utilized to predict the cyber's behaviors.
It can also accommodate large CAD features through backpropagation.
Once the CAD system is developed, the test data of CAD into the deep
learning model to determine the model's accuracy on continuous
assessment. Lastly, the open subjects must serve the set into the CAD
system at a different gateway. The system functions and deep learning
are expected to exhibit cyber ransomware detection accuracy compared
to existing techniques. A survey is conducted to investigate the
possibility of promising the proposed system to other sectors in
Illinois.

We believe that this paper will greatly contribute to expertise and
would appreciate it if you could serve as the TPC member responsible to
handling this paper. Please confirm that you have received this
assignment and indicate whether you accept it.

ONE - DAY WORKSHOP ON

IMPACTS OF POWER QUALITY IN INDUSTRIES & RECENT UPDATES IN TNERC STANDARDS

27TH MAY 2023

PARTNERING ORGANISATION

[redacted] INSTITUTE OF TECHNOLOGY

[redacted] Institute of Technology (IIT) started in 1[redacted] as an Engineering College (presently) for the academic excellence in Engineering and Technology. It is a Government aided autonomous institution affiliated to Anna University, Chennai. The Institute has a reputation with about 8 (eight) well qualified faculty and a serene environment in an [redacted] acre campus to [redacted] around 4[redacted] students every year in graduate and post graduate courses. The Institute has been consistently performing well in academics and placements with a good number of students securing University ranks and getting placed in reputed companies with attractive salary packages. The Institute has also established MoUs with leading industries and research organizations in the country to provide opportunities for internships, industrial training and collaborative research. The Institute is also actively involved in the development of the surrounding rural areas through various outreach activities.

ABOUT THE WORKSHOP

[redacted] is a critical component in the safe and reliable operation of power grid. Condition monitoring and assessment of power equipment such as transformers, circuit breakers, isolators, insulators, and substations can help detect potential problems before they cause outages, improve the reliability and efficiency of the power grid, and reduce maintenance costs. By using advanced technologies such as [redacted], operators can gain real-time insights into the health of their equipment and take proactive measures to prevent failures and optimize performance.

The increasing demand for power supply, especially in [redacted], has put a strain on the existing infrastructure, leading to frequent power outages and voltage fluctuations. These issues can have a significant impact on the economy, affecting industries, businesses, and households alike. Poor power quality can also damage sensitive electronic equipment, leading to costly repairs and downtime.

To address these challenges, the Indian government has implemented various initiatives to improve the power quality and reliability of the grid. One such initiative is the National Power Quality (PQ) Regulations, [redacted], which mandate that all electricity distribution companies must maintain certain standards for power quality, including voltage regulation, frequency control, and harmonic distortion. These regulations also require companies to monitor their power quality and report any violations to the regulatory authorities.
